

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1.-19. (Canceled).

20. (New) A process for the polymerization of at least one aliphatic C₂₋₂₀ or aromatic C₄₋₂₀ hydrocarbyl mono- or multiolefin in the presence of a catalyst and a boron comprising co-catalyst, wherein the catalyst comprises a composition of an organometallic reagent, a spectator ligand (SH) and optionally at least one equivalent of a hydrocarbylating agent, and the organometallic reagent is represented by ML_jX_p, wherein M is a metal from group 3-11, or the lanthanide series, X a monoanionic ligand bonded to M, L a neutral ligand bonded to M, j represents an integer denoting the number of neutral ligands L, and p is the valence of the metal M and the spectator ligand is an imine ligand, or the HA adduct thereof, wherein HA represents an acid, of which H represents its proton and A its conjugate base

21. (New) A process for the polymerization of at least one aliphatic C₂₋₂₀ or aromatic C₄₋₂₀ hydrocarbyl mono- or multiolefin in the presence of a catalyst and a boron comprising co-catalyst, wherein the catalyst comprises a composition of an organometallic reagent, a spectator ligand (SH) and optionally at least one equivalent of a hydrocarbylating agent, and the organometallic reagent is represented by ML_jX_p, wherein M is a metal from group 3-11, or the lanthanide series, X a monoanionic ligand bonded to M, L a neutral ligand bonded to M, j represents an integer denoting the number of neutral ligands L, and p is the valence of the metal M, and the spectator hg and is represented by:

wherein A₁ and A₂ are monoacidic cyclopentadienyl comprising ligands, with q and r

representing an integer denoting the number of Cp ligands with $q+r = 1$ or 2 , optionally linked by n parallel bridging groups Z , A_1 , A_2 separately, or bonded via Z together forming a bidentate diacidic spectator ligand.

22. (New) A process for the polymerization of at least one aliphatic C_{2-20} or aromatic C_{4-20} hydrocarbyl mono- or multiolefin in the presence of a catalyst and a boron comprising co-catalyst, wherein the catalyst comprises a composition of an organometallic reagent, a spectator ligand (SH) and optionally at least one equivalent of a hydrocarbylating agent, and the organometallic reagent is represented by ML_jX_p , wherein M is a metal from group 3-11, or the lanthanide series, X a monoanionic ligand bonded to M , L a neutral ligand bonded to M , j represents an integer denoting the number of neutral ligands L , and p is the valence of the metal M and the spectator ligand is a ligand according to the formula:

in which A_1 is a delocalized η^5 bonding cyclopentadienyl comprising ligand, Z is a moiety comprising boron, or a member of Group 14, and optionally also sulfur or oxygen, said moiety having up to 20 non-hydrogen atoms, and optionally A_1 and Z together form a fused ring system, D is a Lewis basic ligand bonded to Z , comprising a group 15 or 16 atoms and having up to 20 non-hydrogen atoms, optionally D and Z together form a fused ring system and $b = 0$ or 1 .

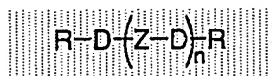

23. (New) A process for the polymerization of at least one aliphatic C_{2-20} or aromatic C_{4-20} hydrocarbyl mono- or multiolefin in the presence of a catalyst and a boron comprising co-catalyst, wherein the catalyst comprises a composition of an organometallic reagent, a spectator ligand (SH) and optionally at least one equivalent of a hydrocarbylating agent, and the organometallic reagent is represented by ML_jX_p , wherein M is a metal from group 3-11, or the lanthanide series, X a monoanionic ligand bonded to M , L a neutral ligand bonded to M ,

j represents an integer denoting the number of neutral ligands L, and p is the valence of the metal M and ligand, represented by:

in which Y represents a (substituted) cyclopentadienyl, (substituted) indenyl, (substituted) fluorenyl, (substituted) heterocyclopentadienyl, (substituted) heteroindenyl, (substituted) heterofluorenyl, or an imine group, R an optional bridging group between the Y moiety and the DR'_n and/or Ar group, D a hetero atom selected from group 15 or 16, R' an optional substituent, Ar an electron-donating aryl group, n the number of R' groups bonded to D, with integer $q \geq 1$.

24. (New) A process for the polymerization of at least one aliphatic C_{2-20} or aromatic C_{4-20} hydrocarbyl mono- or multiolefin in the presence of a catalyst and a boron comprising co-catalyst, wherein the catalyst comprises a composition of an organometallic reagent, a spectator ligand (SH) and optionally at least one equivalent of a hydrocarbylating agent, and the organometallic reagent is represented by ML_jX_p , wherein M is a metal from group 3-11, or the lanthanide series, X a monoanionic ligand bonded to M, L a neutral ligand bonded to M, j represents an integer denoting the number of neutral ligands L, and p is the valence of the metal M and the ligand is represented by

wherein Z is a bridging group, between two donor atom containing groups (D), D a group comprising a hetero atom chosen from group 15 or 16, and R is a substituent and wherein the metal is a metal from Group 7 - 11.

25. (New) The process according to any of claims 20 to 24, wherein the hydrocarbylating agent comprises a metal or a metalloid chosen from group 1, 2, 11, 12, 13 or

14.

26. (New) The process according to claim 25, wherein the hydrocarbylating agent comprises Li, Mg, Zn, or Al.

27. (New) The process according to claim 26, wherein the hydrocarbylating agent is a C₁-C₂₀ trihydrocarbyl aluminum or aluminoxane.

28. (New) The process according to any of claims 20-24, carried out in the presence of a base other than the hydrocarbylating agent.

29. (New) The process according to claim 20, wherein the organometallic reagent comprises a group 4 metal and a cyclopentadienyl comprising ligand.

30. (New) The process according to claim 21 or 22, wherein the metal is a group 4 or group 5 metal, or a metal selected from the lanthanide series.

31. (New) The process according to claim 23, wherein the metal is a group 4 metal with a valency of 3.

32. (New) The polymer obtained with the process of claim 20.

33. (New) The polymer obtained with the process of claim 31, wherein Y is an mine group.

34. (New) The polymer obtained with the process of claim 33, wherein the imine is a ketimide, phosphinimide, guanidine, or iminoimidazoline.

35. (New) The polymer obtained with the process of claim 31 wherein D is a ketimide, phosphinimide, guanidine, or an iminoimidazoline.
